### *Dec 2012 Newsletter*

#### **1) Highlights of 2012 : adult stem cell advances, alternatives for the use of aborted fetal material in commercial products, and new data on the fetal vaccines connection to autism disorder.**

PepsiCo capitulates to an international boycott and stops using aborted fetal cell lines for new product discovery.

Sound Choice has assembled the four necessary categories of data to support human fetal material contaminating vaccines as a major environmental trigger behind the autism disorder epidemic.

Biotech executives joined Sound Choice in Seattle for the first ever strategic planning meeting to reduce and replace the use of aborted fetal material in commercial products.

Adult stem cell advances receive the Nobel Prize while embryonic stem cells are not mentioned. But, before you support them make sure they are fully moral.

Sound Choice announces progress by AVM Biotechnology to optimize adult stem cell clinical effectiveness and new adult stem cell lines to replace the aborted fetal cell lines for vaccine, drug and cosmetic production.

Dr. Deisher receives the 2012 Hero Award from Healing the Culture.

**The Christmas season reminds us of how grateful we are for all our donors and supporters; we could not have accomplished so much without you. We are planning our 2013 goals, with an opportunity for a matching grant, that can only be met with your generosity.**

**PLEASE DONATE TODAY! WE RELY ON YOUR SUPPORT!**

*Dr. Theresa Deisher, President, Sound Choice Pharmaceutical Institute*

**Fieldstead & Co. provides a \$25,000 matching grant challenge to SCPI to help us launch our FetalFree™ product stamp seal of approval.**

Sound Choice has put together a FetalFree™ certification program so that consumers can be easily informed that the products they want to buy do not contain contaminants or material from aborted fetuses. What products are of concern? Cosmetics and anti-ageing creams, drugs and vaccines, and foods and beverages. This is a concern to consumers regardless of their position on women's reproductive rights or embryonic stem cell research. Who wants to unknowingly rub aborted fetal contaminants on their face? Who wants to unknowingly inject their children with aborted fetal DNA contaminants in vaccines? We all want to choose those products that are not tainted with these contaminants. But we cannot choose the better product until we know which products are safe to purchase.

The potential matching grant will give us the opportunity to market this critical certification program to the companies whose products you want to know about. A company who proves their products do not contain these toxins will have the right to display the FetalFree™ stamp on their product packaging and marketing material. The FetalFree™ stamp

will give consumers peace of mind as they shop. But, we can't get the grant unless you give generously so that we can get the 'matching' funds.

We may all be worried about taxes in 2013 and beyond, and we understand that, but if you cut back on support for programs like Sound Choice then revolting practices win and our children and grandchildren lose. Any amount you can dedicate to this matching grant challenge is important. We need large donors, we need small donors, and we need prayers. The great challenge is that we need to raise these funds without sacrificing our other programs. Can you help us by increasing your donation this Christmas season? Any amount is a blessing.

**PepsiCo capitulates to an international boycott and stops using aborted fetal cell lines for new product discovery.**

Just a few weeks after biotech met in Seattle last April to develop commercial strategies to reduce, remove and replace aborted fetal material in commercial products PepsiCo capitulated and agreed to stop using aborted fetal cell lines to discover new additives and flavor enhancers. One of our board members, Debi Vinnedge, led an international boycott effort against PepsiCo

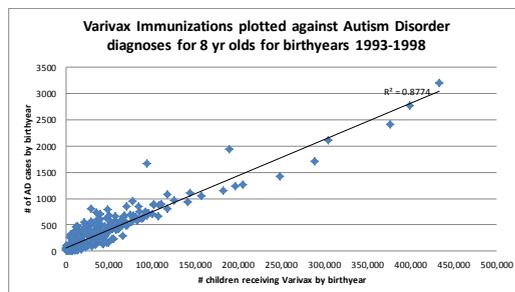

because they refused to stop using aborted fetal cell lines. When enough people just said “NO” to PepsiCo, they capitulated. They were hurt economically and this allowed them to see the light and do the right thing. Who said we can’t make a difference? Of course we can!

**Sound Choice has assembled the four necessary categories of data to support human fetal material contaminating vaccines as a major environmental trigger behind the autism disorder epidemic.**

The four necessary characteristics of any environmental toxin to be responsible for human disease epidemics include : the toxin should not have been present before the start of the epidemic, the toxin should have an apparent dose-effect, the toxin should have a biological mechanism of action compatible with the disease, and broad or universal exposure to the toxin must have occurred.

1. In the US autism disorder began to rise in 1980, just after they started manufacturing the childhood MMR II vaccine using aborted fetal cell lines. Before aborted fetal contaminants were present in childhood vaccines regressive autism disorder was unheard of. Aborted fetal contaminant toxins were not present before the start of the autism epidemic.

2. In 1988 autism disorder rose again, right after they doubled the number of children vaccinated with aborted fetal cell produced MMR II and right after they added a second dose to the immunization schedule. In 1995 autism disorder took another steep rise right after aborted fetal cell contaminated chickenpox vaccine was introduced. The number of children who are vaccinated with the heavily contaminated chickenpox vaccine predicts the number of children who will be diagnosed with autism disorder. You can see this highly significant relationship in the graph below.

3. Fetal DNA contaminants are known to be able to insert into DNA and could disrupt gene function and cause mutations in our

children. In 2011 and 2012 over 30 top academic universities have published data showing that children with regressive autism have hundreds of new mutations that are not inherited from their parents genes. The FDA has been worried about DNA insertions since they first approved using aborted fetal cell lines to make vaccines. Worry is not enough when our children are at stake. Sound Choice is doing the studies to determine the real and present dangers of this known biological mechanism for pathology.

4. Children are universally exposed to these aborted fetal produced vaccines. The media publishes stories about the numbers of parents who refuse vaccines, the disease outbreaks we are seeing, and the fact that autism has continued to increase, implying that vaccines are unrelated. What the news does not report, however, is that parents tend to refuse only one or two of the up to 36 vaccines their children receive. Parents have been refusing vaccines they believe contain mercury, not the aborted fetal produced vaccines, so of course autism has continued to rise. Today, children receive up to 10 jabs with aborted fetal contaminated vaccines, starting as early as 2 months of age.

**In 2012 biotech executives joined Sound Choice in Seattle for the first ever strategic planning meeting to reduce and replace the use of aborted fetal material in commercial products.**

Last April we were thrilled to host a dozen biotech executives who came together to share ideas about the most efficient way to reduce, remove and replace aborted fetal cells from commercial products. The excitement of this critical planning meeting translated immediately to action. At least 3 other companies have already joined AVM Biotechnology in the ranks of companies actively working and developing alternative biomedical products free from the taint of aborted fetal material. WOW! In 2013 we hope to announce that even more companies have pledged to eliminate aborted fetal material from their practices and products. We can do it; we can keep this crucial momentum going with your help.

**Adult stem cells draw Nobel Prize attention.**

While mainstream media may have deceived the American public into believing that embryonic stem cells are the magic bullet for human disease, the 2012 Nobel Committee isn't buying it.

The Nobel Committee drew attention to the fact that adult stem cell therapy is morally acceptable and less affected by immune rejection, in contrast to embryonic or fetal stem cells, and awarded their Nobel prize highlighting adult stem cell research. Because of this, in 2013 we will likely see regulatory approval for moral adult stem cell therapies for several diseases, including heart attack. In contrast, 2011 saw the sudden and unexplained cancellation of Geron Corporation's embryonic stem cell trials, most likely because of adverse effects of the embryonic stem cells.

Adult stem cells are a win-win for everyone, if they are obtained in a completely moral fashion. We know of only one company who has made that pledge, AVM Biotechnology. Adult stem cells are safe. They are effective. They are affordable. Safe, effective and affordable, and no other human being has to be harmed - that's a choice that should be a no-brainer, and the Nobel Prize Committee agrees.

**Sound Choice announces progress by AVM Biotechnology to optimize adult stem cell clinical effectiveness and new adult stem cell lines to replace the aborted fetal cell lines for vaccine, drug and cosmetic production.**

Propelled by the information that organizations like Sound Choice are making available, commercial companies have begun to step up to create alternatives for the aborted

fetal manufactured products. AVM Biotechnology, a Sound Choice affiliated company, has exciting patents pending to remove aborted fetal cells from all biomedical products - [www.avmbiotech.com](http://www.avmbiotech.com).

### **Dr. Deisher receives the 2012 Hero Award from Healing the Culture.**

Dr. Deisher was honored with the 2012 award for her work at Sound Choice and AVM Biotechnology. Board member Gellert Dornay gave a moving introduction for Dr. Deisher and wrapped things up by reading the mission statement of AVM Biotechnology, the type of corporate statement Mr. Dornay pointed out that we don't hear very often. To inspire all of our supporters as we move into 2013 I will end with that mission statement. I hope it is an inspiration to all of you this Christmas season.

**AVM Biotechnology Mission Statement :**  
Our corporate values are based on a profound respect for human life from its beginning until its natural conclusion. Taking into consideration the totality of the sanctity of life issues, including human trafficking, prisoner's rights, immigrant rights, and human fetal and embryonic respect:  
***Our mission is to conduct both biomedical research and business activities in such a manner that no other human or human being is trafficked, physically exploited or intentionally harmed.***
